

## Run-Flat Tires

Run-flat tires can be repaired just like any other ATV tires. They work on any ATV wheel, new or used, and they don't require any special tools or wheel assembly. Spikes, broken bottles, corn stalks, and a 2-inch drill bit. Regardless of how sharp, jagged, pointed or edged the obstacle, it's no match for incredible run-flat tires. Unlike ordinary ATV tires, our run-flat tires give you unprecedented puncture resistance. The stronger sidewall is made possible by the addition of a special, extra-thick molded insert. So even if you would punch a hole – equivalent to that made by a 2-1/2 inch tungsten steel power bit – through the tread of your run-flat ATV tires, the sidewall inserts with unique compounds and an advanced bead design will enable you to ride for at least 50 miles or longer. On 50 Km/H Speed even in case of total inflation of the tire, in case of explosion or gunfire, these run-flats will provide you with enough speed and distance.
